Not illustrated. 1870 Excerpt: . . . appellation to which reference has just been made. But the sense in which the term expectation is frequently received, and the manner in which the function it designates is spoken of, and even defined, by writers on life contingencies, receive no countenance from the nature or the mode of derivation of that function. 162. Of the prevalent misconceptions on this subject one is, that the expectation at a specified age, considered as a term of years, is more likely than any other term, to be the actual duration of that life; and another is, that it denotes a term of years which the life in question is as likely to survive as not. Neither of these notions is correct. The first would imply that the year in which a life is most likely to fail is that in which its expectation terminates. But the year in which this event is most likely to happen is obviously that succeeding the attainment of the age opposite which the mortality table shows the greatest number of deaths. Thus, by the Carlisle Table, after the 4th year, more deaths take place in the 75th year than in any other. In this year, therefore, a life of any age, from 4 to 74 inclusive, is, by this table, more likely to fail than in any other single year that can be named; while the actual expectations of but few of those intermediate ages will be found to terminate in their 75th...
